LIXIL Group’s Greenhouse Gas Reduction Target Validated by the Science Based Targets Initiative

Tokyo, Japan – LIXIL Group Corporation (“LIXIL Group”), a global leader in the housing and building industry, has received validation from the Science Based Targets (SBT) initiative¹ for its greenhouse gas emissions target. LIXIL is the first company in the building products sector globally to have its targets approved by the SBT initiative.

LIXIL Group announced its revised Corporate Responsibility (CR) strategy in March 2016, under which it is addressing three important global issues: sanitation and hygiene, water conservation and environmental sustainability, and diversity and inclusion. As part of this strategy, LIXIL Group established its Environmental Vision 2030 with the goal of realizing positive environmental contributions from products and services that surpass the environmental footprint from all business activities, achieving a NETZERO Environmental Footprint.

The targets approved by the SBT initiative outline how LIXIL Group will reduce its environmental footprint in order to achieve its Environmental Vision, comprising a 30% reduction in Scope 1 and 2 emissions², and a 15% reduction in Scope 3 emissions³ by 2030 compared to fiscal 2015 levels. To achieve these targets, LIXIL Group is increasing energy efficiency in its operations, introducing renewable energy, and promoting energy efficient products and services, such as for the adoption of Net Zero Energy Houses (ZEH).

LIXIL Group President and CEO, Kinya Seto, said, "To help mitigate the impact of climate change, LIXIL Group is committed to reducing its environmental impact across its entire supply chain, from procurement to final product disposal. We will continue to develop products and services that enhance people's living spaces while also being environmentally friendly."

Notes

1. The Science Based Targets (SBT) initiative is a joint collaboration between CDP, the World Resources Institute (WRI), the World Wide Fund for Nature (WWF), and the United Nations Global Compact (UNGC). It was established in 2015 to encourage companies to meet science-based targets for cutting greenhouse gases, in order to hold the increase in the global average temperature to below 2 degrees Celsius above pre-industrial levels.
2. Scope 1 & 2: GHG emissions from fuel and electricity used by an organization.
3. Scope 3: GHG emissions through the supply chain, such as procurement and use of products.
4. Net Zero Energy House (ZEH): A house with net zero annual primary energy consumption, achieved by enhancing the efficiency of thermal insulation and equipment (energy conservation), and generating energy through photovoltaic power generation systems and other means (energy creation).
