LIXIL Develops New Stain-Resistant Ceramic Technology That Promises a Clean Toilet that Lasts a Century

“AQUA CERAMIC” is a world-first for sanitary ware, enabling an enduring shine through the power of water

Tokyo, Japan – LIXIL Corporation (“LIXIL”), a global leader in housing and building materials, products, and services, announces the development of AQUA CERAMIC, a new technology in sanitary ware that resists stains and enables toilets to retain their shine for 100 years. The AQUA CERAMIC toilet is the first in the world to address the four main issues relating to cleanliness in toilets – scuffing and scratching, marks from waste, stains from hard water, and the build-up of bacteria. LIXIL will offer AQUA CERAMIC in its mainstay household-use toilet series in Japan beginning April 2016.

Cleanliness remains the primary concern for users in relation to toilets. LIXIL has been working for more than a quarter of a century to address this issue, researching the main sources of uncleanliness in toilets and developing new technologies to meet user needs.

These efforts have led to the development of AQUA CERAMIC, by combining existing performance around scuff prevention and anti-bacterial functionality in compliance with ISO22196 standards, with new properties to resist waste and hard water stains.

The new AQUA CERAMIC technology features super-hydrophilicity performance on the ceramic surface, which allows the rinse water to penetrate beneath any waste that may have attached to the ceramic, lift it with the power of water, and flush it away. In addition, to prevent the hard water stains that occur when silica in the rinse water chemically combines with hydroxyl groups (~OH) on the ceramic’s surface, AQUA CERAMIC utilizes a structure without exposed hydroxyl groups. This stops the formation of hard water stains, keeping the ceramic surface flat and smooth.

To ensure that this functionality can be retained over the long-term, LIXIL has developed a new technique for glazing that integrates a special substance to resist waste and hard-water stains at the molecular level. Unlike the coatings applied to other materials, this allows the
strength of these properties to be retained. Tests confirm that AQUA CERAMIC will not show wear for more than 100 years. With basic, regular care, AQUA CERAMIC will continue to shine like new, and can considerably reduce the amount of water and cleanser needed for cleaning.

Beyond adopting AQUA CERAMIC in its household toilet series from April 2016, LIXIL also plans to develop other household products adopting AQUA CERAMIC, including washstands, toilet sinks, and other ceramic products.
